The annual fall meeting of the Alumnae Association will be held at Emmanuel on Sunday, October 26, at three o'clock. Following the meeting, tea will be served and a reception held for our new alumnae, the class of 1941. Genevieve Steffy, '27, is chairman of the tea and reception. Assisting her are pourers Madeleine O'Brien, '26, Mary J. O'Shea, '28, Mrs. James Shaughnessy, '39, Eleanor McMannon, '41, and Mary Kittredge, '41.

The Reception Committee is composed of the following members of the class of 1939: Catherine Dolan, Muriel Hayes, Ellen Keane, Catherine Molloy, Catherine O'Connor, Florence O'Shea, Marie Podolski, Jane Prout, Mary Riley, Louise Touney.

The fall meeting is always a pleasant time of reunion with classmates, fellow alumnae, and faculty members, as well as an occasion for discussing new ideas and making plans for the year's activities. Now, while you are thinking about it, we hope that you will reach for your engagement book or calendar and put an entry under "October Twenty-Sixth."

FACULTY NOTES
The Reverend Francis X. Sallaway, Dr. William F. Linehan, and Dr. James E. Downey have left the Education Department and their courses have been taken over by Miss Rose O'Connell. The Reverend Joseph Robinson has replaced the Reverend John Callahan in the Philosophy Department. Sister Joseph Mary has succeeded Sister Julia Benedicta in the English Department. Catherine Twomey, '40, is a newcomer to the French Department in place of Helena Leonard, '37. Jane Holland has left the Expression Department, and Eleanor MacDonald that of Social Research.

A department of Portuguese has been opened, with Sister Margaret Pauline in charge. This now completes the courses in South American languages offered by Emmanuel.

NEW JOBS FOR WOMEN
The question has come frequently to the Appointment Bureau during the last year, especially during the last few months, "What changes has the defense program made in possibilities for college women?" There are numerous changes. Opportunities have greatly increased in private industry and government for those prepared in mathematics, physics, and chemistry; in hospitals for those with a biology and chemistry background.

College graduates with nurses' training are in great demand — and are scarce. Young women with college background who have had special training in physiotherapy and occupational therapy are less numerous than the positions which are available at the present time.

College graduates with adequate secretarial training are needed by government agencies and by private companies as well. It seems probable that there will be need for young women adequately trained and experienced in social service techniques and in recreation for USO and comparable activities in areas of camps and defense industries. There have been adequate opportunities for some time for college women with professional training in social work. This is also true for those with library training.

There are very few women available for supervisory positions in industry — women who have the training for and experience in factory production. This is a possibility few college women consider, even those who have had economics as their major interest.

There seems to be increased business in retail stores of various kinds on the opening day of her term of office to greet the faculty and members of the Alumnae, most especially those of 1941. This is not the first time that Esther Turnbull has stood before us on this platform. As an undergraduate, a graduate student, and an ardent Alumna, she has supported all things Emmanuel from a junior member of a committee to chairman of major affairs, and we know through that, in fact, that is why we have entrusted to her the honor and the responsibility of President.

At present a member of the faculty of Girls' High School, Boston, she started her teaching career at the Plymouth Normal School in Plymouth, N. H., then came to Boston to teach at the Oliver Wendell Holmes Junior High and to do further graduate work at Boston University and Simmons College.

She is a member of that ideally-calendared profession, she had summers free, and lists Europe, California, Alaska, Ireland, and California again as her summer stops. Ask her to show you her pictures sometime!

Once again a daughter of '27 and member of Kappa Gamma Pi wields the gavel. Esther M. Turnbull, A. B., '27, A. M., '28, fresh from a California holiday will step to the platform on the opening day of her term of office to greet the faculty and members of the Alumnae, most especially those of 1941. READ THIS ALOUD
On Sunday afternoon, October 26, Alice Johnson, '29, will be in the library of Emmanuel College, hard at work on her new hobby of collecting two dollar bills. Help to get the Association off to a good financial start and save yourself the trouble of mailing your money later by being one of the many in line on Sunday, waiting for a due receipt.
Emmanuel Alumnae at Work

PORTRAIT NUMBER TEN

MARY NORTON

In nineteen-twenty-six the prophetic Spirit of the Epilogue saw a room filled with retorts, test tubes, Bunsen burners, and other scientific apparatus, and a group of women, faces flushed, but with calm demeanor, receiving congratulations of scores of people. Pushing my way into the group, I learned that after two years of experimentation, a wonderful discovery had been made. The long hystenated terms—they were too much for my poor old head,—said the Spirit, "but I know that the scientists were...and Mary Norton, of the University of Vienna."

The prediction of those who were privileged to know Mary Norton as a student did not miss. One internationally famous metallurgist has referred to her as America's top-rank­ing woman in her special field—Metallography. There is a woman in England and another in Germany who would rank with her. There are few men in this country who are in her class. (And this from an authoritative source.)

Metallography! What is this thing metallography? Is it not in the list of subjects taught at Emmanuel. Where did she pick it up?

Metallography—it should be called metaleogeology—deals with the microscopic structures of metals. For Mary Norton, this means those metals from which ships, bridges, anti-aircraft guns, and hairpins are made. Our industrial civilization has been based upon metals, and, in its astounding evolution, it has come to devour them voraciously. They, in turn, are vital to its continuance. The holocaust that rages in Europe is largely a struggle for control of the primary sources of metals.

Mary Norton made contact with the industry immediately following graduation from Emmanuel. She was at an impressionable age. The romance of the evolution of raw metals into practical, useable products that would elevate millions to higher planes of living gripped her. She attended Columbia and her vision grew. She studied chemistry and realized her first thrill of accomplishment from chemical engineering. Metallography is an allied science and uses chemistry. It uses the beakers, test tubes, and analytical balances of chemistry, and, in addition, the microscope and the X-Ray diffraction machine. Chemistry analyzes and synthesizes molecules. Metallography, in all of its phases, studies the interior architecture of metals which we use molecules or atoms as its primary building stones, and the beautiful space patterns of these, called crystals, as its primary structural units. It would be expected that a fine mind so alluring should attract a girl of Mary Norton's stimulating imagination. She acquired her knowledge of it by her own efforts and by years of patient research.

Has Mary changed? No, one could easily pick up the thread of friendship with her at any time. In appearance she has not grown older. She still has her naïve smile and speaks modestly of her achievements. Swimming and dancing are her longed-for diversions; but her week is frequently seven days long, so she snatches her fun betimes. This girl, who is giving her hands, her mind, her eyes and her heart for America, has a secret ambition. She would like to have time to see the girls in her class and to meet the members of the alumnae. Someday she may declare an armistice and then you, too, will know this distinguished and fascinating alumna—Mary Norton.

SCHOLARSHIPS AWARDED

The Emmanuel College Scholarships were awarded on the basis of the results of the "Scholastic Aptitude Test" and the "Scholastic Achievement Test." The College Entrance Examination Board.

The Emmanuel College Dramatic Society Scholarship was won by Virginia Horrigan, of Watertown, a graduate of Newton High School, and the Massachusetts Chapter of Notre Dame Namur Federation Scholarship by Rose King, of Sharon, a graduate of Roxbury Academy of Notre Dame.
